

VERITAS-MEDICA

Clinical AI you can **trust**.

Documentation and claim protection
for Saudi hospitals.

Your records

Verified facts

Your clinicians

Medicine's hardest problems aren't medical.

01

3+ hours lost every day

Clinicians spend more time documenting than treating.

industry benchmark

02

1 in 7 claims rejected

Errors surface after submission — the revenue is gone.

industry benchmark

03

AI you can't verify

Generative tools can sound confident and still be wrong.

“

AI that cannot invent facts.

Every statement is checked against the patient's real record. **If it isn't there — we don't say it.**

—
Built into the foundation of the product — not a policy, not a promise.

Don't take our word for it. Check us.

- ✓ Diagnosis on file: Hypertension (I10)
- ✓ Service covered: Consultation 11700-00-10
- ✓ Necessity rule: Matched
- ▶ VERDICT: **READY – submit with confidence**

- ✓ Patient record: kidney function 28% – this week
- ✓ Active medication: Metformin 1000mg
- ✓ Safety rule: renal threshold crossed
- ▶ ALERT: **dose review recommended**

Proof follows every answer

Notes

Drug alerts

Orders

Claims

The note **writes itself.**

Arabic & English

Real consultation language — both, in one visit.

The doctor stays in charge

Nothing is applied without review and signature.

Hours back, every day

Target: –65% documentation time, measured in your pilot.

Find the error **before the payer does.**

تحقق قبل الإرسال

Check before you send

Every claim is verified — verdict before submission.

Fix it on the spot

The right code is suggested while the doctor is still there.

Revenue that stays

Fewer rejections — found by you, not by the payer.

target: -85% rejections

The record decides what's true

The AI rephrases facts from your records — it never originates one.

Doctors sign everything

No note, order, or code is ever applied automatically.

Proof is one click away

Every statement shows the exact facts behind it.

It cannot drift

A future update cannot silently erode these guarantees.

These are properties of the product's foundation — not of model behaviour.

- **Arabic first**

Full RTL interface, Hijri dates, Arabic patient messages.

- **NPHIES-native**

Built for the national claims platform from day one.

- **Your data stays home**

In-Kingdom by design — inside your hospital, even.

- **Your AI, your walls**

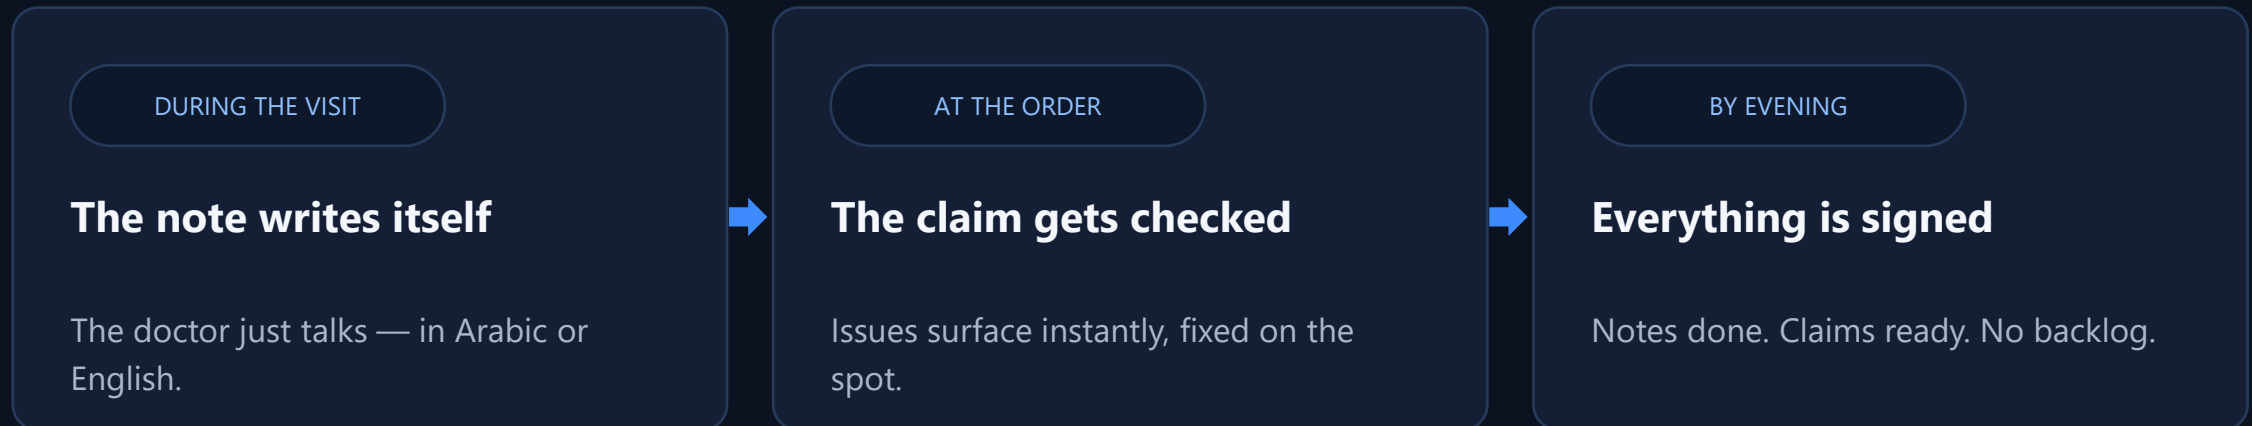

The language engine can run on your own servers.

```
# WHERE PATIENT DATA LIVES  
Location    inside your hospital  
Leaves      never  
AI engine   your servers – optional
```

No foreign clouds. No exceptions. Self-hosting keeps every byte inside your walls.

One visit. Everything done.

The documentation, the order, and the claim — finished in the same minute.

Others write notes. We guard the encounter.

CAPABILITY	AMBIENT VENDORS *	VERITAS-MEDICA
Notes written during the visit	✓	✓
Claims protected before submission	—	✓
Proof behind every statement	—	✓
Runs inside your hospital	—	✓

* typically — characterization, not a claim about any specific product

Notes are where it starts. **Trust and revenue are the difference.**

WHAT YOU SAW IS REAL

Every answer — and its proof
Notes, alerts and dashboards
Tamper-proof audit trail
Arabic + English, end to end

WHAT IS SIMULATED

Patient data — synthetic
Payer connection — simulated
No real claim has been sent

A real product, shown on synthetic data.

Prove it **in your hospital.**

WEEK 1

Connect

Read-only. Zero disruption.

WEEK 2

Shadow

Runs alongside your workflow.

WEEK 3

Live

Opt-in doctors, real encounters.

WEEK 4

Measure

Time + rejections vs your baseline.

One department. Two champions. **Thirty days to proof.**

01

Meet the product

A working session, live on synthetic data.

02

Pick a department

Internal medicine or cardiology to start.

03

Name two champions

Clinicians who shape the workflow with us.

04

Grant the pilot

Thirty days — read-only first, measured together.

Medicine deserves AI it can **trust**.
